Item specifics

Country/Region of Manufacture: United States

Seller's description

Up for sale is an Unclassified Meteorite, tested and containing a high concentration of Nickel. Weighs approx.: 5.50 ounces! Measurements are: 3" x 2 3/8"x 1 3/8" at its tallest point.

This piece is the most interesting piece I've ever seen!! Both sides have different pictures of 3 dimensional looking sculptured scenery and alien/ human looking people melted into it. Almost looks like somebody carved or molded little rituals right into the rock! It's a trip! Seriously, the pictures are nothing compared to what this meteorite looks like!! On one side there is a glob of melted flow lines and melted pools forming a volcano with lava flow lines flowing down each side like it just erupted, and to me it looks like burning people, melting into or out of the rock, if you look on the lower right hand side in a few of the first few pictures you will see what I am talking about. Both sides have natural built in kick-stands, and on the other side, when you turn it over..amongst all the flow lines, it looks like some sort of cocoon with a hatching larvae or something in it, and there is also a trail of flow lines surrounding a rose or desert flower or something! You have to see it! Wow!! I wonder if it means something!! It really is something amazing! Out of this World!!

Cool!! Nobody has anything like this!
