#### Item specifics

Classified: Martian Calc-Carbonate (Limestone)

At 904 grams, this is an extremely important specimen, as you will all soon see!  
Unlike terrestrial limestone, it contains chromite, titanium & iridium & numerous impact & shock metamorphisms. It is also comprised of carbon (pyroitized) remnants of ammulites & nummulites from the now extinct Martian oceans & seas. This stone is only for the believers that our Earth is composed of the same geology as Mars; as proven by the current Mars Spirit/Rover program. For those non-believers & skeptics, the truth is in the science. Faith has absolutely nothing to do with this discovery! Please do your due diligence before purchasing or commenting on this amazing discovery. Only serious inquiries & scientific discourses please!

Seller assumes all responsibility for this listing.
