Item specifics

Condition: New: A brand-new, unused, unopened, undamaged item (including handmade items). See the seller's listing ... [Read more](#) Classified: Meteorite

This beautiful 558 gram, full-stone, North American Lunar Impact Melt Breccia is, truly, a celestial work of art! It is among the first specimens to be recovered from a witnessed 1987 fall in the remote wilderness of Northern Alaska.

It has a 100% reddish-brown & greenish-brown fusion crusted exterior, or as we like to call it, "Entry Melt!" The breccias of Anorthosite & Olivine silicates are plentiful and easily identified on the exterior with the naked eye.

It has been our decision, that this specimen not be cut, or sliced. It is simply too beautiful to damage. Instead, we have cut, sliced & polished thin sections from an exact pairing, in order to confirm & authenticate our findings. Thin section photos are available upon request. We will post a couple of these images with this listing, for your review & perusal.

These thin section images of the stone's interior are consistent with all known signatures of a Lunar origin, including; Anorthosite brecciated fragments, Maskelynite (impact shocked & melted Plagioclase Feldspar), shocked Olivine Gabbro & Noritic silicates, shock veining, the presence of Ilmenite (Titanium Oxide), Merrillite (Lunar Glass), Apatite (Phosphate), Troilite (Clinoenstatite), Titanium & Chromite "blebs" and melt inclusions, and "lamellae" features in the Pyroxenes.

The "Official" classification of this specimen by the IMS is pending & contingent upon analytical confirmation & verification. It is currently being posted as "Unclassified," yet this should not deter you from taking advantage of an outstanding purchase of such a scientifically & historically important find. For the next 10 days, ONLY!!.. this beautiful specimen is selling for just \$1,000.00 per gram! Once the 10 days are up, or it receives its classification with an "Official Title;" which ever comes first, you may not see this low price again! And, of course, this would be tremendous for you, providing you don't hesitate!!

To better secure your purchase, you will be provided with a "Certificate of Authenticity" from Uncometeorites, and a full, 100% money-back guarantee! This should be proof, enough, that we have done our research by the letters, and we do know our Lunar meteorites! If you are needing a second opinion, please ask your local university research lab for a thin section comparison before you buy. Thin section comparisons, by most reliable standards, are "fool-proof," and "iron-clad." We strongly recommend, that you do your own "due-dilligence," and research. Please do your homework and compare our analysis with that of currently classified Lunars, and with NASA's "Apollo Lunar Collection." Even at this low price of \$1000.00 per gram, it is an important & critical financial investment, and you need to invest your money wisely!
